

CTBS Checklist

Do you know all this stuff with NO calculator?

Fractions:

- Add (find common denominator, then add numerators)
- Subtract (common denominator, then subtract numerators)
- Multiply (make it an improper fraction, then multiply straight across, then reduce)
- Divide (make it an improper fraction, change to multiplication sign and flip the second fraction, then multiply across)
- Change between mixed numbers and improper fractions
- Reduce to lowest terms
- Change to decimal (divide)
- Change to percent (move decimal two to the right)
- Order/compare fractions (make them all have the same denominator, then you can order them from lowest to highest based on the numerator)

Decimals:

- Add/subtract (line up the decimal points)
