

Introducing MathFacts

by JoeVEnterprises

The computer program that works like flash cards but is a lot more fun!

Input your answer and hit the “Am I Right” button. If the response is correct, the program plays a funny sound bite as an immediate reward. If the response is wrong, the user gets another try to input the correct answer (after two attempts, the program gives the correct answer). Complete 50 problems and a short video of a dancing baby is played! The program keeps track of the total number of problems tried, the number right and the number wrong. MathFacts can even be customized with your own sound bites or small video.

ONLY \$9.95
